Estimate and record gestational age at every visit

If <37 weeks and birth is expected in the next 7 days, see Threatened Preterm Birth action plan

* Always use multiple methods to estimate gestational age
* Measure fundal height for every woman as part of clinical assessment. Check for twins with or without ultrasound if fundal height and LMP differ >3 weeks

This pregnancy wheel is made possible by USAID and the Maternal and Child Survival Program and does not reflect the views of USAID or the United States Government.
When birth is expected in the next 7 days...

...and gestational age is >24 and <37 weeks

- Consider transfer
- Offer Threatened Preterm Birth Care (TPBC)
- Prepare for preterm birth (PTB)

*See TPBC Action Plan

- Preterm labor (PTL)
- Antenatal hemorrhage
- Severe pre-eclampsia
- Preterm pre-labor rupture of membranes (PPROM)

Offer dexamethasone. For PPROM offer erythromycin. Offer magnesium sulfate (MgSO4). For PTL consider nifedipine. Prepare for PTB.

Preparing for possible fetal demise.
